## SUMMARY

---

Computer Information Systems student and Navy veteran with four years administering systems and networks in uniform and 10+ years of direct customer service, now supporting end users and escalating faults daily in a 24/7 hospital. Administer a self-hosted GLPI service desk end to end — ticket queues, categories, SLAs, and asset inventory — and run a Windows Server 2022 domain where I manage Active Directory accounts, security groups, permissions, and Group Policy. Comfortable being the person a non-technical user comes to at their worst moment: explain the fix in plain language, resolve it or route it correctly, and write it down so the next person does not have to ask. Seeking the Technology Support Specialist I position with UTS Desktop Support Services.

## CORE COMPETENCIES

---

Tier I Technical Support · Break-Fix & Service Request Fulfillment · Hardware & Software Troubleshooting · Active Directory Account & Permission Administration · Ticket Management (GLPI, Quest KACE) · Knowledge Article & Documentation Authoring · End-User Training · Remote & Walk-Up Support · Customer Experience Management · Issue Escalation & Follow-Through · Process Standardization · Systems Administration

## TECHNICAL SKILLS

---

**Desktop & Endpoint:** Windows 10/11, macOS, Linux desktops; laptop and desktop hardware troubleshooting and repair; peripherals, printers, and mobile device support; imaging and software deployment; Microsoft Office and Microsoft 365 applications

**Directory & Identity:** Active Directory (AD DS) user and group administration, Group Policy, permissions and access management, DNS, DHCP, AD Certificate Services, Entra ID / hybrid identity concepts (AZ-800 coursework)

**Service Desk & ITSM:** GLPI (self-hosted administrator — queues, categories, SLAs, asset inventory), Quest KACE (KBOX) — issue logging, triage, and escalation; knowledge base and end-user documentation

**Networking:** TCP/IP, DNS/DHCP, VLANs, VPN (WireGuard, Tailscale), SMB file shares, SSH, wireless and wired connectivity troubleshooting, structured cabling

**Servers & Platforms:** Windows Server 2022, Ubuntu Server, Proxmox VE and VMware virtualization, Docker, network file storage, backup and restore

**Scripting & Tools:** PowerShell, Bash, Git/GitHub, SharePoint, technical writing and runbook authoring

## IT SUPPORT & SYSTEMS ADMINISTRATION EXPERIENCE

---

*Hands-on environment I built and administer; documentation and write-ups published at [steven-garcia.dev](https://steven-garcia.dev).*

### Service Desk Administration — GLPI ([helpdesk.steven-garcia.dev](https://helpdesk.steven-garcia.dev))

- Deployed and administer a self-hosted GLPI service desk — configured ticket queues, categories, SLAs, and asset inventory, and work tickets through the same intake-to-resolution lifecycle a Tier I team runs.
- Published it securely for outside reviewers with browser-based remote desktop access, and wrote the end-user documentation explaining how to use it.

### Windows Server Domain & Account Administration

- Built and administer a Windows Server 2022 domain (AD DS with integrated DNS and DHCP) — created organizational units, security groups, and user accounts, and manage permissions and access.
- Authored Group Policy enforcing password complexity, rotation, and account lockout across the domain; stood up an internal certificate authority issuing trusted certificates to internal services.

### Endpoint, Server & Network Support

- Support Windows, Linux, and macOS endpoints across a five-VLAN network — connectivity faults, authentication failures, permissions issues, storage, and hardware replacement — diagnosing from logs rather than guessing.
- Hardened and maintain Ubuntu servers and wrote a Bash health-check script on a scheduled timer that reports disk, memory, service, and failed-login problems automatically before users notice them.
- Monitor availability with Prometheus and Grafana dashboards and automated alerting, and maintain tested backup and restore procedures — a full restore verified in 11 seconds with zero errors.

## PROFESSIONAL EXPERIENCE

---

**Phlebotomist — Weekend Night Shift**  
*Uvalde Memorial Hospital — Uvalde, TX*

Oct 2024 – Present

- Sole phlebotomist on duty overnight for a 24/7 hospital — interact directly with patients, nurses, and physicians across every unit, prioritizing competing urgent requests independently.
- Troubleshoot equipment and endpoint issues on shift; log and escalate everything beyond that through the Quest KACE (KBOX) ticketing system with the diagnostic detail IT needs to resolve it without a follow-up call, and track issues through to closure.
- Work daily in Epic and electronic health record systems; maintain strict data privacy and confidentiality standards under HIPAA.

### **Maintenance Supervisor III**

Dec 2019 – May 2024

*Texas Department of Criminal Justice — Texas*

- Trained and supervised crews, provided escalation support and guidance to less experienced workers, and enforced standardized procedures across all assigned work.
- Authored technical reports, maintenance records, and work documentation; tracked all requests through a facility management ticketing and asset system.

### **Critical Care & EKG Monitor Technician**

May 2024 – Nov 2024

*CHRISTUS Children's Hospital — San Antonio, TX*

- Monitored live telemetry systems, identified abnormal readings in real time, and escalated per protocol; performed preventive maintenance on monitoring equipment and served as a resource to less experienced staff.

### **Gas Turbine Systems Technician — Electrical (GSE), E-4**

Feb 2009 – Nov 2013

*U.S. Navy — Yokosuka, Japan*

- Served as administrator on the engineering department mainframe computers and its local and wide-area networks — applied diagnostic, corrective, and recovery techniques to keep information systems available, and wrote programs to handle data across a range of applications.
- Troubleshoot electronic and control circuitry to component level from schematics; repaired cabling, wiring, and connectors; performed preventive maintenance on digital data equipment.
- Worked independently with very limited supervision and mentored junior technicians through hands-on training.

### **Security Lieutenant**

Sep 2016 – Jul 2018

*Sherwood Valley Casino — Willits, CA*

- Interviewed, hired, and trained new officers; directed daily work and appraised performance; resolved customer complaints and incidents calmly in a high-traffic public-facing environment.

## **EDUCATION & CERTIFICATIONS**

---

- A.A.S., Computer Information Systems — Southwest Texas College, Uvalde, TX (expected May 2027). Coursework includes Windows Server Hybrid Administration (AZ-800 aligned): AD DS, Group Policy, DNS/DHCP, remote access, VPN, RADIUS/NPS.
- Computer Science / System Administrator — Occupational Skills Award, Southwest Texas College (earned 2026).
- CompTIA A+ — in progress, target Q4 2026 · CompTIA Network+ — planned 2027 · IBM Cybersecurity Fundamentals (earned).
- U.S. Navy veteran, Feb 2009 – Nov 2013.
